# Data Management For Mobile Computing (Advances In Database Systems)

## Synopsis

Earth date, August 11, 1997 "Beam me up Scottie!" "We cannot do it! This is not Star Trek's Enterprise. This is early years Earth." True, this is not yet the era of Star Trek, we cannot beam captain James T. Kirk or captain Jean Luc Picard or an apple or anything else anywhere. What we can do though is beam information about Kirk or Picard or an apple or an insurance agent. We can beam a record of a patient, the status of an engine, a weather report. We can beam this information anywhere, to mobile workers, to field engineers, to a truck loading apples, to ships crossing the Oceans, to web surfers. We have reached a point where the promise of information access anywhere and anytime is close to realization. The enabling technology, wireless networks, exists; what remains to be achieved is providing the infrastructure and the software to support the promise. Universal access and management of information has been one of the driving forces in the evolution of computer technology. Central computing gave the ability to perform large and complex computations and advanced information manipulation. Advances in networking connected computers together and led to distributed computing. Web technology and the Internet went even further to provide hyper-linked information access and global computing. However, restricting access stations to physical location limits the boundary of the vision.

## Book Information

Series: Advances in Database Systems (Book 10)

Hardcover: 157 pages

Publisher: Springer; 1998 edition (October 31, 1997)

Language: English

ISBN-10: 0792380533

ISBN-13: 978-0792380535

Product Dimensions: 6.1 x 0.5 x 9.2 inches

Shipping Weight: 13 ounces (View shipping rates and policies)

Average Customer Review: Be the first to review this item

Best Sellers Rank: #4,985,315 in Books (See Top 100 in Books) #68 in Books > Computers & Technology > Programming > Algorithms > Memory Management #224 in Books > Computers & Technology > Programming > Languages & Tools > Compiler Design #636 in Books > Computers & Technology > Security & Encryption > Encryption
